Frequently Asked Questions (FAQ)

Q1: How often should I change the air compressor oil?

A1: The frequency of oil changes depends on your compressor model and usage. Your **Titan industrial air compressor owners manual** will specify the recommended oil change intervals. Generally, this ranges from every 50 to 200 hours of operation. Ignoring oil changes

leads to premature wear and tear on internal components.

Q2: What should I do if my compressor won't start?

A2: First, check the power supply and circuit breaker. Then, refer to your manual's troubleshooting section for common starting problems, which may involve checking the motor, belts, and pressure switch.

Q3: How do I identify a leak in my air compressor system?

A3: Carefully inspect all hoses, fittings, and connections for visible leaks. You can use soapy water to help locate leaks; bubbles will form where air is escaping. Refer to your manual for guidance on leak repair.

Q4: What does CFM mean, and why is it important?

A4: CFM stands for cubic feet per minute, representing the volume of air your compressor delivers per minute. It's a critical specification determining the compressor's suitability for various tasks. Higher CFM means faster work completion for air tools.

Q5: My compressor is overheating; what should I do?

A5: Turn off the compressor immediately. Check for obstructions around the cooling vents, ensuring adequate airflow. Refer to your manual for specific troubleshooting steps related to overheating, which might involve checking for blockages or other issues.

Q6: Can I use any type of oil in my Titan air compressor?

A6: No. Your manual specifies the correct type and viscosity of oil for your compressor model. Using the wrong oil can damage internal components and void your warranty.

Q7: Where can I find a replacement parts list for my Titan compressor?

A7: Your **Titan industrial air compressor owners manual** may contain a parts list, or you can contact Titan directly or visit their website for information on replacement parts.

Q8: What should I do if my pressure switch is malfunctioning?
