This directly contributes to enhanced resolution, enabling the visualization of atomic-scale structures in materials science and biology.
- **Detector Technology:** Improvements in detector technology, such as direct electron detectors, allow for higher sensitivity and faster data acquisition rates. This is crucial for cryo-EM, where capturing high-resolution images of delicate, hydrated biological

samples requires rapid data collection to minimize radiation damage.

- **Computational Image Processing:** Sophisticated computational algorithms are now routinely used to process and enhance electron microscopy images, further improving resolution and revealing subtle features that would otherwise be obscured by noise or artifacts. This is especially critical in 3D reconstruction techniques used in cryo-EM.

Novel Imaging Techniques: Expanding the Scope of Electron Microscopy

Beyond improvements in resolution, advances in imaging and electron physics 167 have led to the development of novel imaging techniques that provide unique insights into material structure and function.

- **Cryo-electron Microscopy (Cryo-EM):** This technique allows for the visualization of biological samples in their near-native, hydrated state. This is particularly significant for studying macromolecular complexes and cellular structures, revealing details of protein function and assembly that are impossible to obtain with traditional electron microscopy methods. Cryo-EM has revolutionized structural biology, playing a crucial role in determining the structures of numerous proteins and viruses.
- **Scanning Transmission Electron Microscopy (STEM):** STEM uses a finely focused electron beam to scan across a sample, collecting scattered electrons to form an image. This technique allows for high-resolution imaging of both the surface and interior of a sample, offering complementary information to TEM. STEM-based techniques like **electron energy loss spectroscopy (EELS)** and **energy-dispersive X-ray spectroscopy (EDS)** provide chemical information about the sample at the nanoscale.
