Understanding Your GoPro Hero 3: Black vs. Silver Editions

Before diving into the specifics of operating your GoPro Hero 3, it's crucial to understand the differences between the Black and Silver editions. This distinction significantly impacts features and capabilities. The GoPro Hero 3 Black Edition boasted superior video resolution (up to 4K at reduced frame rates) and frame rates compared to its Silver counterpart. Key Differences: Hero 3 Black vs. Silver

- **Video Resolution & Frame Rate:** The Hero 3 Black offered significantly higher resolutions and frame rates, including 4K (at lower frame rates), 1080p at higher frame rates, and 720p at even higher frame rates. The Hero 3 Silver had a lower maximum resolution and frame rate.
- **Photo Resolution:** While both offered still image capture, the Hero 3 Black generally provided higher resolution options.
- **Protune Settings:** The Hero 3 Black featured Protune, allowing for more granular control over image settings like color, sharpness, and ISO. This was absent in the Silver Edition.
