- **Engine Runs Rough:** This can indicate problems with the carburetor (incorrect fuel-air mixture), a clogged air filter, a faulty spark plug, or low-quality fuel.
- **Engine Overheats:** This is often caused by a clogged cooling system, low oil levels, or a faulty cooling fan (if equipped). Check oil levels and clean the cooling fins.
- **Engine Loses Power:** This might signal problems with the air filter, carburetor, or ignition system.

Remember always to disconnect the spark plug before performing any maintenance or repair on the engine to prevent accidental starting.
