FAQ

Q1: What is the difference between simplifying and solving an algebraic expression?

A1: Simplifying an algebraic expression means rewriting it in a more concise and manageable form without necessarily finding a numerical value for any variables. For example, simplifying $2x + 3x$ becomes $5x$. Solving an algebraic equation, on the other hand, means finding the value(s) of the variable(s) that make the equation true. For example, solving $2x + 5 = 11$ results in $x = 3$.
